

# Prognostics Readiness – why it is never too early to start

**1** Do you gather **process data** and **condition data** on your critical equipment?

Yes No

**2** Do you keep **data histories**, e.g. in a historian?

Yes No

If “Yes” to both:

**You are ready for Prognostics!**

**Benefits**  
from starting  
early

**You prognosticate already** – by operating equipment and planning future maintenance interventions. Why not get decision support from your data?

**Get support in planning your road ahead** – which data upgrades are needed where?

**Focus your efforts** – where are gaps in understanding assets? Which assets are most critical? Where to focus maintenance efforts?

**Free up time of your engineers** – reduce the time spent on sifting through raw data, increase the time spent solving impending issues

**Cross-organizational learning and benchmarking** – create transparency and learning opportunities

**Top management decision support** – use easy-to-interpret Prognostic Reports to facilitate top level decision making

**No risk, limited cost** – full online service (SaaS), no need for training
